

**Town of Chevy Chase Standard Notes for Construction:**

1. All observation wells to be 6" diameter.
2. Builder shall contact the Town Engineer at 301-949-2011 for a pre-construction meeting prior to initiation of construction.
3. Builder shall contact the Town Engineer at the following milestones for the installation of drywells and raintanks. Additional notifications may be required for other SWM BMPs.
  - a. Prior to filling in drywells (all piping should be visible),
  - b. If piping installed separate from drywell, call for separate inspection
  - c. For final inspection
4. Builder shall take photographs of excavated drywells and PVC pipe. Photographs of drywells should show a measuring tape and location of PVC pipe.
5. Roof down spout connections to drywells must be provided per the approved plan. Variations from the approved plan will be remedied at the contractor's expense.
